

OPEN TO INTERNSHIPS & COLLABORATIONS

HARI PRASATH

AI & MACHINE LEARNING DEVELOPER

I build and ship full-stack AI products — LLM applications, RAG pipelines, and vector search — on top of modern web technologies.

Building practical AI products, not demos.

I'm Hari Prasath, an AI & Machine Learning developer based in Pollachi, Tamil Nadu. I'm pursuing a B.Sc. in Artificial Intelligence and Machine Learning at Shri Nehru Maha Vidyalaya College of Arts and Science, graduating in 2028 — but most of what I ship comes from building real products end to end.

My work sits at the intersection of applied AI and web engineering: taking an LLM from an API call to a production feature — document ingestion, chunking, embeddings, vector indexing, semantic retrieval, and grounded answers users can actually trust.

Right now I'm focused on RAG systems, LLM API integrations, and the full-stack craft that turns them into tools people use — like StudyMate AI, a deployed RAG study assistant, and WorkSkills AIRA, a bilingual career guidance chatbot.

hari — profile

role	AI & ML Developer
location	Pollachi, Tamil Nadu, India
education	B.Sc. Artificial Intelligence & Machine Learning — 2028
focus	RAG · LLMs · Vector Search
status	open to internships & collaborations

Shipped, deployed, in production.

Two full-stack AI products — from document ingestion to grounded answers, from the Claude API to a bilingual chat interface.

01

StudyMate AI

FULL-STACK RAG STUDY ASSISTANT

[Live Demo !](#)

[Source !](#)

A study assistant that lets students upload PDF or DOCX material and get grounded answers, quizzes, and flashcards generated from their own documents.

- PDF/DOCX ingestion & text extraction
- Document chunking ! Gemini embeddings ! ChromaDB vector index
- Semantic retrieval with grounded, citation-backed LLM answers
- FastAPI REST backend with a separate React + TypeScript + Tailwind frontend

React · Vite · TypeScript · Tailwind CSS · FastAPI · Google
Gemini · ChromaDB

02

WorkSkills AIRA

AI CAREER GUIDANCE CHATBOT

[Source !](#)

A bilingual career guidance chatbot powered by the Anthropic Claude API, delivered through a polished, responsive chat experience in English and Tamil.

- Claude API integration with env-var-based key protection
- Node.js/Express backend
- English/Tamil bilingual interface
- Responsive chat UI with suggested prompts, typing indicators & theme support

Node.js · Express.js · Anthropic Claude API

The stack behind the systems.

FRONTEND

React

TypeScript

Vite

Tailwind CSS

From document to grounded answer.

01

RAG Pipelines

Ingest documents, extract and chunk text, generate embeddings, and index everything into a vector store for retrieval.

02

Grounded LLM Responses

Answers constrained to the retrieved context, with citations that point back to the source document.

03

Vector Search

Semantic retrieval over embedded document chunks using a vector database such as ChromaDB.

04

LLM API Integration

Integrating the Google Gemini and Anthropic Claude APIs with secure, environment-variable-based key handling.

05

REST API Backends

FastAPI and Express.js services that expose AI features to production frontends.

06

Full-Stack Product Shipping

React and TypeScript frontends deployed separately from AI backends — shipped, not prototyped.

How the site is built.

Stack	React 19 + TypeScript on Vite, styled with Tailwind CSS v4 and shadcn/ui primitives. Motion via Framer Motion. Deployed from this repository with Convex handling backend/auth scaffolding.
Design system	Dark cinematic theme on a deep-space background (#050315) with a single violet accent family (#2F27CE / #433BFF), Inter for text and JetBrains Mono for technical labels.
Sections	Sticky navigation · Hero · About · Featured Projects · Technical Skills · AI Engineering Capabilities · Education · GitHub · Contact · Footer.
Motion	Restrained Framer Motion: staggered hero entrance, scroll-triggered reveals, hover states and navigation transitions. No decorative animation loops.
Accessibility & SEO	Semantic landmarks, labeled navigation, keyboard-focusable links, descriptive meta/Open Graph tags and a PWA manifest.
Links	All project, GitHub, LinkedIn and email actions are live — nothing on the site is a static mockup.
